PROFESSIONAL SUMMARY

A Java Backend Developer with 2.5+ years of experience building production-ready REST APIs and microservices using Java and Spring Boot. Experienced in inventory-driven business logic, securing APIs with Spring Security and JWT, working with MySQL, and deploying applications using Docker, Kubernetes, and CI/CD pipelines in Agile environments.

CORE TECHNICAL SKILLS

Backend: Java, Spring Boot, REST APIs, Microservices, JPA, Hibernate.

Database: MySQL, SQL Queries, Indexing, Schema Design.

DevOps Tools: Docker, Kubernetes, Jenkins, GitHub, Maven, Postman, IntelliJ, VS Code, Git, JUnit, Mockito.

Frontend: Angular 18, TypeScript, Bootstrap, HTML, CSS.

Design Practices: SOLID Principles, Clean Code, Layered Architecture, Exception Handling, Logging, Modular Design.

PROFESSIONAL EXPERIENCE

Java Developer
Hanuma Infotech | April 2024 – Present

- Developed Spring Boot services to manage warehouse inventory, tracking inbound and outbound stock movements and real-time availability across multiple warehouse locations.
- Implemented business logic for stock allocation, reservations, and validations ensuring accurate inventory levels and preventing overselling across retail operations systems.
- Developed microservices using Spring Boot, implementing layered architecture with JPA, Hibernate, and service-level abstractions for clean, testable code.
- Secured RESTful APIs with Spring Security and JWT, applying role-based access control and token-based authentication for protected routes.
- Designed and implemented global exception handling with @ControllerAdvice, standardized API responses, and logged system events using Logback.
- Integrated MySQL database with optimized queries, indexes, and schema migrations; built reusable repository layers using Spring Data JPA.
- Automated CI/CD pipelines using Jenkins and Maven, streamlining builds and environment-specific deployments.
- Wrote unit tests using JUnit and Mockito for service-layer logic, validating business rules and mocking repository dependencies.
- Deployed applications on Apache Tomcat and configured application profiles, logging levels, and resource limits via externalized properties.

Junior Java Developer
Poulomi Estates Pvt Ltd | July 2023 – March 2024

- Assisted in developing and maintaining Spring Boot APIs for property, customer, and payment management with basic validations.
- Fixed bugs, implemented simple business logic, and handled edge cases to support smooth real-estate operations.
- Wrote and executed MySQL queries for properties, bookings, and customers, maintaining data accuracy and supporting dashboards.
- Tested APIs using Postman, worked with JWT authentication, and coordinated effectively with frontend developers and team daily.

PROJECTS

CarFlex Website | Tools Used : SpringBoot, Java, Angular, Bootstrap, MySQL [GitHub](#)
A car rental and purchase platform featuring secure authentication, dynamic listings, search filters, and scalable architecture

Fitness-Tracker Dashboard | Tools Used : SpringBoot, Java, Angular, Bootstrap, MySQL [GitHub](#)
Real-time fitness tracking dashboard with goal monitoring, interactive charts and responsive layout

Employee Management System | Tools Used : SpringBoot, Java, Angular, Bootstrap, MySQL [GitHub](#)
CRUD-based employee management interface using Angular and Spring Boot with consistent responsive UI/UX.

My Portfolio Website | Tools Used : Angular, Bootstrap [GitHub](#) | [Live](#)

EDUCATION

Bachelor of Technology
Kakatiya University of Engineering and Technology | GPA: 7.5

Diploma in Engineering
Government Polytechnic, Masab Tank | Percentage: 88%
