PROFESSIONAL SUMMARY

Passionate and highly skilled Full Stack Developer with 2+ years of experience delivering robust, scalable, and maintainable web applications using Angular 18, Spring Boot, MySQL, and Docker/Kubernetes. Proven ability to architect and implement RESTful APIs, secure systems with JWT & Spring Security, and build seamless UI experiences with RxJS, Flex Layout, and modern Angular patterns. Backed by in-depth understanding of clean coding practices, Agile methodologies, and DevOps automation, delivering production-ready solutions inspired by 20+ years of enterprise-grade engineering expertise.

CORE TECHNICAL SKILLS

Frontend: Angular 18, TypeScript, JavaScript, RxJS, Angular Material, Bootstrap 5, HTML5, CSS3
Backend: Java, Spring Boot, Spring Security, REST APIs, JPA, Hibernate, Lombok
Database: MySQL
DevOps & Tools: Docker, Kubernetes, Jenkins, GitHub, Maven, Apache Tomcat, Postman, STS, VS Code, Git
Design Practices: SOLID Principles, Clean Code, Layered Architecture, Modularization, Lazy Loading

PROFESSIONAL EXPERIENCE

Java + Angular Developer
Hanuma Infotech | March 2023 – Present

- Developed full-stack web applications using Angular 18 for the frontend and Spring Boot microservices for the backend, ensuring end-to-end functionality and modular architecture.
- Built responsive UI components using Angular standalone components, Angular Material, and Bootstrap 5 with support for lazy loading and dynamic routing.
- Implemented secure RESTful APIs using Spring Boot, integrated with MySQL via JPA and Hibernate, and ensured robust exception handling using @ControllerAdvice.
- Integrated JWT-based authentication and role-based authorization using Spring Security to protect both frontend and backend routes.
- Containerized backend services using Docker and orchestrated deployments across environments using Kubernetes for scalability and high availability.
- Automated CI/CD pipelines with Jenkins and Maven to streamline build, test, and deployment workflows across dev, staging, and production.
- Integrated Postman for API testing and Swagger/OpenAPI for live API documentation, improving QA collaboration and interface clarity.
- Applied RxJS and Angular interceptors to manage asynchronous data streams, error handling, and token injection for secure API communication.
- Collaborated in Agile teams with daily stand-ups, sprint planning, JIRA tracking, and Git-based code reviews using GitHub, ensuring continuous delivery and team-wide code quality.

FEATURED PROJECTS

CarFlex Website | Tools Used : SpringBoot, Java, Angular, Bootstrap, MySQLGitHub

- Full-stack platform for car rental, purchase, and listings built using Angular 18 and Spring Boot.
- Features secure login (JWT), role-based access, search filtering, dynamic listings, and booking workflow.
- Deployed with Docker + Kubernetes for modular, scalable microservice delivery.

Fitness-Tracker Dashboard | Tools Used : SpringBoot, Java, Angular, Bootstrap, MySQLGitHub

- Built a fitness monitoring system with real-time goal tracking and data visualization via Chart.js.
- Responsive design with Angular Flex Layout and modular architecture.

Employee Management System | Tools Used : SpringBoot, Java, Angular, Bootstrap, MySQLGitHub

- CRUD-based admin interface for employee operations (Add, Edit, Delete, Search) using Angular and Spring Boot.
- Ensured a consistent UI/UX across mobile and desktop environments.

Portfolio Website | Tools Used : Angular, BootstrapGitHub | Live

- Created a high-performance developer portfolio with animations, lazy-loaded sections, and modular design patterns.
- Showcases modern UI techniques with Angular 18, Bootstrap, and scroll-triggered animations.

EDUCATION

Bachelor of Technology – Civil Engineering
Kakatiya University of Engineering and Technology | GPA: 7.5

Diploma in Civil Engineering
Government Polytechnic, Masab Tank | Percentage: 88%
